ExportWorkgroup

ExportWorkgroup is the fastest and easiest way to export your data out of your Workgroup vault. It preserves your project structure and keeps your SOLIDWORKS references in-tact!

ExportWorkgroup scans through your Workgroup vault project structure and creates a Windows folder for each corresponding Workgroup project. It then copies the latest version of each file into these new folders -preserving the original file name and any SOLIDWORKS references.

These new folders and files may then be copied or imported into another PDM system such as PDM Standard or Professional.

System Requirements:

ExportWorkgroup requires SOLIDWORKS and Workgroup Client 2013 or newer.
